SUMMARY

Artificial Intelligence & Data Science student with a strong foundation in data analysis, statistics, and machine learning. Experienced in building AI-powered applications, intelligent assistants, and real-time systems using Python and modern web technologies. Focused on engineering high-impact, automated systems to solve complex real-world challenges through practical and scalable solutions.

TECHNICAL SKILLS

Languages: Python, C++, JavaScript, SQL

Frameworks & Libraries: Flask, Streamlit, React.js, Tailwind CSS, Pandas, NumPy

AI / ML: Machine Learning, Statistical Analysis, Feature Engineering, Large Language Models (LLMs), Retrieval-Augmented Generation (RAG), AI Agents, Exploratory Data Analysis (EDA), Model Evaluation

Developer Tools: VS Code, Git, GitHub, Jupyter Notebook, MySQL Workbench, Firebase, Vercel

PROJECTS

Intelligent AI Assistant

| Python · LLM APIs · Ai Agents · Google Vision API

- Orchestrated an autonomous digital assistant using complex LLM function calling to automate 10+ daily tasks — including email synthesis, calendar management, and system-level control — reducing manual effort by over 60%.
- Improved average API response time by 25% (1.8 s → 1.35 s) by re-architecting synchronous prompt chains into parallel async retrieval pipelines, eliminating idle wait cycles between API calls.
- Integrated Google Vision API for multi-modal input, enabling 98% accuracy in visual data interpretation so users can query images and screenshots naturally without additional context.

Real-Time Emergency Response System

| JavaScript · Firebase Realtime DB · Cloud Sync

- Engineered an end-to-end hospital alert platform achieving sub-200 ms notification latency and 99.9% uptime across 5+ hospital units by designing a dual-sync Firebase + local DB architecture that eliminates single points of failure.
- Synchronized live data streams between cloud and local databases in real time, ensuring zero data loss for critical incident logs even during network degradation events.
- Designed a centralized dashboard consolidating live resource tracking and emergency response allocation, cutting average coordinator response time and removing tab-switching overhead.

Multi-Hospital DICOM Sharing Platform

| React.js · Firebase · MySQL · DICOM

- Spearheaded development of a secure, HIPAA-aware healthcare platform enabling real-time DICOM medical image synchronization across 5+ simulated hospital nodes — replacing manual USB and email-based transfers entirely.
- Reduced medical image retrieval latency by 35% by implementing a structured metadata indexing system in Firebase, replacing full-collection scans with $O(\log n)$ lookups.
- Eliminated cross-departmental file transfer bottlenecks through workflow digitization, measurably improving collaboration efficiency and reducing doctor wait time for imaging data.

EDUCATION

B.Tech — Artificial Intelligence & Data Science

2023 – 2027

Vidya Pratishthan's Kamalnayan Bajaj Institute of Engineering & Technology, Baramati, India

Relevant Coursework: Machine Learning, Data Structures & Algorithms, Database Systems, Computer Vision, Statistics for Data Science

ACHIEVEMENTS

- Ranked in the top 5% at university-level technical hackathons focusing on AI-driven automation and healthcare accessibility solutions.
- Deployed 3+ full-stack production applications on Vercel and Firebase, managing real-world user data with secure auth flows and structured database rules.
- Built all three major projects end-to-end independently, demonstrating full-stack ownership and execution ability.
