

CASE STUDY

SMARTCITIMANAGE

Final-year multi-agent AI system combining RAG, IoT and Digital Twin technology for smart cities.

Category: agents

Tech: RAG, IoT, Digital Twin, LangChain, AI Agents, Python

SYSTEM OVERVIEW

FUSING RAG, IOT & DIGITAL TWINS

IoT sensors stream live data while RAG grounds the AI agents in domain knowledge. A Digital Twin visualizes the physical environment in real time.

- * Agents: Multi-Agent
- * Data: IoT Streams
- * Model: Digital Twin

AGENT ORCHESTRATION

SPECIALIZED AGENT ROLES

Each agent handles a domain monitoring, analysis, and recommendations coordinated to give operators actionable insights.

- RAG-grounded knowledge retrieval for reliable answers.
- IoT anomaly detection across infrastructure.
- Digital Twin visualization for situational awareness.
