

CASE STUDY

DEMO PROJECT WEB OS SHOWCASE

A test project validating the filesystem-driven content pipeline.

Category: fullstack

Tech: Next.js, TypeScript, Tailwind CSS, Framer Motion

WHAT THIS PROJECT PROVES

ZERO-CODE ONBOARDING

Adding this project required no component changes. The build-time generator scanned the folder, validated data.json, and wired it into Finder, Spotlight, and the Document Reader.

* Code Changes: None

* Images: 3

* Source: One Folder

CONTENT SYSTEM DETAILS

HOW IT WORKS

data.json is validated against a Zod schema. Images are served from /public/projects/<slug>/ and sorted alphabetically. The README renders as markdown and the case-study.pdf opens in a native iframe.

- Numeric prefixes (01-, 02-) control gallery order.
- Missing README.md only logs a build warning.
- Invalid data.json fails the build with a clear message.
