

CASE STUDY

INTELLIGENT AI ASSISTANT

Autonomous assistant using LLM function calling to automate 10+ daily tasks.

Category: agents

Tech: Python, LLM APIs, AI Agents, Function Calling, Google Vision API

SYSTEM OVERVIEW

AN AUTONOMOUS ASSISTANT

An agent that uses LLM function calling to control tools email synthesis, calendar management, and system-level operations.

- * Tasks Automated: 10+

- * Manual Effort Saved: 60%

- * Vision Accuracy: 98%

CASE STUDY

INTELLIGENT AI ASSISTANT

Autonomous assistant using LLM function calling to automate 10+ daily tasks.

Category: agents

Tech: Python, LLM APIs, AI Agents, Function Calling, Google Vision API

PERFORMANCE & DESIGN

ASYNCHRONOUS RETRIEVAL PIPELINES

Parallel async chains replaced synchronous prompt sequences, cutting API latency.

- API response time reduced 25% (1.8s 1.35s).
- Google Vision API enables multi-modal input.
- Function calling drives tool use and system control.
